Janus Henderson
— INVESTORS —

Henderson Multi-Manager Investment OEIC

Who are Janus Henderson Investors?

Janus Henderson Investors exists to help clients achieve their long-term financial goals.

Formed in 2017 from the merger between Janus Capital Group and Henderson Group, we are committed to adding value through active management. For us, active is more than our investment approach – it is the way we translate ideas into action, how we communicate our views and the partnerships we build in order to create the best outcomes for clients.

We are proud to offer a highly diversified range of products, harnessing the intellectual capital of some of the industry's most innovative and formative thinkers. Our expertise encompasses the major asset classes, we have investment teams situated around the world and we serve intermediary, institutional and individual investors globally. As at 30 June 2017, we had approximately US\$344.9bn (£265.5bn) in assets under management, more than 2,000 employees and offices in 27 cities worldwide*. Headquartered in London, we are an independent asset manager that is dual-listed on the New York Stock Exchange and the Australian Securities Exchange.

At Janus Henderson, we believe in the sharing of expert insight for better investment and business decisions. We call this ethos *Knowledge. Shared. Knowledge. Shared* is reflected both in how our investment teams interact and in our commitment to empowering clients in their decision-making. In our view, knowledge is powerful when it is shared.

Authorised Corporate Director's (ACD) report

We are pleased to present the Report & Accounts for Henderson Multi-Manager Investment OEIC for the six months ended 31 July 2017.

Authorised status

The Henderson Multi-Manager Investment OEIC is an open-ended investment company with variable capital incorporated in Great Britain under registered number IC000146 and authorised by the Financial Conduct Authority (FCA) with effect from 4 February 2002.

Henderson Multi-Manager Investment OEIC is structured as an umbrella company for the purposes of COLL. The assets of each fund will be treated as separate from those of every other fund and will be invested in accordance with the investment objective and policy applicable to that fund. The objectives of each fund are stated within the pages of this report relating to that fund.

All of the funds are classed as Non-UCITS Retail Schemes (NURS) comply with Chapter 5 of COLL. Shareholders are not liable for the debts of the company.

The Henderson Multi-Manager Investment OEIC ('the Company') qualifies as an alternative investment fund ("AIF") in accordance with the directive 2011/61/EU ("AIFMD") of the European parliament.

The ACD has delegated the actual portfolio management of the funds of the Henderson Multi-Manager Investment OEIC to Henderson Global Investors Limited (the 'Investment Manager'). The Investment Manager is authorised and regulated by the Financial Conduct Authority and has been appointed by the AIFM to provide investment management services to the Company.

Fund liabilities

Each fund is treated as a separate entity and is a segregated portfolio of assets and those assets can only be used to meet the liabilities of, or claims against that fund.

Director's statement

In accordance with the requirements of the Collective Investment Schemes Sourcebook as issued and amended by the Financial Conduct Authority, I hereby certify the investment report and financial statements on behalf of the Directors of Henderson Investment Funds Limited.

C. Chaloner
(Director)

27 September 2017

Global equity markets rose during the period (MSCI World Index +5.9% in sterling, +11.0% in dollars). US equities were held back in sterling terms by weakness in the dollar, although were positive in aggregate, while UK markets advanced despite a general election that failed to return a majority government. Europe too saw a number of elections. The most significant of these produced market-friendly results that lifted investor sentiment, as did strong economic data from the eurozone. Many central banks maintained accommodative measures, with the exception of the US Federal Reserve (Fed), which raised interest rates by 25 basis points twice over the six-month period.

In the UK, the broad FTSE All-Share Index rose by 7.1% despite jitters about a snap general election to be held in June. The election was a major focus of the period, and the event itself brought more uncertainty, as it ended in a hung parliament. Economic data showed second-quarter gross domestic product (GDP) growth that met market expectations but was generally subdued. Business confidence for the third quarter of 2017, however, showed growing faith in the economy: the Confederation of British Industry's Business Optimism Index rose on significantly improving manufacturing production. Inflation was higher - May's year-over-year figure of 2.9% marked the highest reading since June 2013 but later was slightly slower at 2.6% in June. The Bank of England (BoE) kept interest rates on hold over the period, though policymakers showed wariness regarding the inflation rate.

European equities also exhibited significant strength (MSCI Europe ex UK +13.7% in sterling, +10.8% in euros) in a busy six months that saw elections in the Netherlands and France. With euro-sceptic candidates polling strongly, investors took caution, fearing for a breakdown of the eurozone, particularly following the success of anti-globalisation movements in the UK and US in 2016. But the votes (in particular, France's election of Emmanuel Macron over euro-sceptic Marine Le Pen) returned favourable results for the single-currency bloc. Broad economic data in the eurozone was another source for optimism, with GDP advancing 0.6% in the second quarter and the euro moving steadily higher versus the dollar. The European Central Bank (ECB) made no changes to policy, but its President Mario Draghi noted his belief that the bank's stimulus measures have worked, saying, "the threat of deflation is gone."

US equities were another positive performer, with the S&P 500 Index rising 4.5% in sterling terms (+9.5% in dollars), helped by strong first- and second-quarter corporate earnings. Early in the period, equities were also supported by hopes that the Trump administration would be able to deliver on its pro-growth campaign promises. Optimism became more subdued as time wore on, however, dampened by geopolitical events (such as airstrikes in Syria and tensions with North Korea) and questions about the president's ties to Russia during the 2016 election season. GDP growth slowed from the fourth quarter to the first, but bounced back up to 2.6% in the second quarter. Inflation missed targets in May and June, depressed by lower fuel prices, and the dollar weakened against sterling. Regardless, domestic equities continued their ascent, with the S&P 500 repeatedly hitting highs. The Fed followed through on guidance for more rate hikes in 2017: benchmark interest rates were lifted by 25 basis points in both March and June.

Japanese equities measured by the TOPIX Index rose by 4.6% in sterling (+7.6% in yen) over the six months. In April, the Bank of Japan raised its 2017 growth forecast, and the International Monetary Fund (IMF) followed suit, upwardly revising its estimate for 2017 GDP expansion to 1.2%. While growth for the January-March quarter missed expectations, the figure of 0.3% marked the fifth consecutive quarter of growth. June saw Japan's balance of trade and unemployment figure reach more favourable levels after both stumbled in May. The future of trade was further bolstered in July when the country struck a free-trade deal with the European Union, which is expected to particularly benefit the Japanese automobile sector. On the policy front, the Bank of Japan kept rates on hold, but again pushed back expectations for reaching its 2% inflation target to March 2020.

Asian equity markets advanced by 13.8% in sterling (+19.3% in dollars), according to the MSCI AC Asia Pacific ex Japan Index. China had a strong start to the year: joblessness decreased, annualised GDP growth reached 6.9% in both the first and second quarters, and the IMF upgraded its projection for the country's 2017 growth to 6.6%. However, Moody's downgraded the nation's credit rating by one notch, citing an increasing reliance on debt-fuelled growth. India saw its stock market climb on optimism regarding Prime Minister Narendra Modi's government reforms, with the rupee moving steadily higher versus the US dollar from February. Over the period South Korea recorded largely positive economic data – and record highs for its KOSPI index, but also saw its president impeached and jailed.

Emerging market equities, as measured by the MSCI Emerging Markets Index, gained strongly, rising 13.8% in sterling (+19.2% in dollars). Central banks had an active six months: Brazil and Russia eased policy multiple times, while Mexico increased interest rates. The Brazilian stock market, a big winner in 2016, experienced volatility as the oil price floundered and President Michel Temer was formally charged with corruption. Russia enjoyed improved year-on-year GDP growth in the first quarter, helped by rebounding mining and manufacturing; however, the domestic equity market was down sharply on falling oil prices. Indian equities followed an upward trajectory in the six months to end-July, but falling inflation proved worrying. Elsewhere, Taiwan and South Korea saw their equity markets climb steadily higher over the six-month period.

Market review (continued)

In fixed income, 10-year US Treasury and UK gilt yields fell, while German bund yields rose (yields move inversely to prices). Of these, bunds had the bumpiest ride, rising and falling in anticipation of various elections in western Europe and spiking towards the end of the period on worries about potential ECB tightening. US bond yields slipped as investors grew less enthusiastic about the country's domestic outlook; questions over Russia's involvement in the election of President Trump emerged and there was sustained difficulty in passing Trump's new healthcare legislation. Corporate debt benefited from inclusion in central-bank bond-buying programmes. By May, European companies were on track for record-breaking issuance in 2017.

Commodity markets experienced mixed fortunes in the period. The price of Brent Crude oil zigzagged sharply throughout the six months, and oil fell in aggregate, though ended July close to where it began. Increased supply from the US helped to drive prices down. Gold gained, with highs coinciding with uncertainty-inspiring events such as US airstrikes on Syria, the UK's general election, and North Korea's nuclear missile tests. Copper fared well with prices hitting new two-year highs in the final days of July.

Aggregated notes to the financial statements for the six months ended 31 July 2017

Basis for preparation

The accounting policies, distribution policies and potential risks applied are consistent with those of the financial statements for the year ended 31 January 2017 and are described in those annual accounts.

Investment review

Market review

The fund returned 5.7% over the period, against the IA Flexible Investment sector average, which returned 6.0%.

The portfolio's allocation to European ex UK and Asia ex Japan equities contributed strongly to overall fund performance for the six-month period. Notable strong returns were delivered by holdings in the BlackRock European Dynamic Fund and the Henderson European Growth Fund (up 15.8% and 13.9%, respectively), as both strongly outperformed the broader market. Within Asia ex Japan, the standout performer was our holding in the Hermes Asia ex Japan Equity Fund, which gained 19.6%.

Elsewhere, solid performance contribution was received throughout the portfolio, with notable returns from positions in the CF Lindsell Train UK Equity Fund (up 13.1%), the Findlay Park American Fund (up 5.7%) and the First State Japan Equity Fund (up 14.3%).

Meanwhile, the allocation to emerging market debt delivered a negative contribution during the period, with the BlackRock Emerging Markets Flexible Dynamic Bond Fund losing 6.2%. Elsewhere, commodity positions also detracted, with the ETFS Physical Gold and the Source Bloomberg Commodity Exchange Traded Fund losing 0.5% and 7.8%, respectively.

Activity

The overall allocation to European ex UK equities was increased during the period, and in May the relative weighting versus the sector average was moved from an underweight to an overweight position. Within the underlying holdings, we fully redeemed the Artemis European Growth Fund, with proceeds funding a new holding in the Mandarin Unique Small & Mid-Caps Europe Fund. We also closed out the short position in Euro Stoxx 50 index futures.

Early on in the period, we added a new holding in the BlackRock Emerging Markets Flexi Dynamic Bond Fund. Meanwhile, we redeemed the remaining holding in the Stewart Investors Emerging Market Leaders Fund, and subsequently added to the Henderson Gartmore Emerging Markets Fund.

Later on in the period, we scaled back other regional and global equity positions, taking profit and raising cash. Within UK equities, we trimmed the holding in the Old Mutual UK Alpha Fund in order to fund a new small position (0.5%) in the Polar Capital UK Value Opportunities Fund. The new fund has a small/mid-cap bias with a value style, and is managed by a highly experienced team with a strong track record. The team is very well known to us from its previous tenure at Miton.

Performance values are at close of business and may differ from the performance summary.

Operating charges

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures

There were no share classes launched or closed in the period.

Ongoing charge figure

The annualised ongoing charge figure (OCF) of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	31/07/17	31/01/17
	%	%
Class A	2.35	2.37
Class B	1.60	1.62
Class I	1.53	1.56
Class Y	2.35	2.37

The OCF includes a synthetic element of 0.69% (31/01/17: 0.71%) to incorporate the OCF of underlying funds.

The OCF is calculated in accordance with guidelines issued by the European Securities and Markets Authority (ESMA).

The fund is a non-UCITS fund and we have used this disclosure to enable comparison across our fund range.

Risk and reward profile

The Fund currently has 4 types of share class in issue: A accumulation, B accumulation, I accumulation, and Y accumulation. The risk and reward profile of each type of share class is as follows:

The Synthetic Risk and Reward Indicator (SRRI) is calculated based on historical volatility over a rolling 5 year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions. The value of an investment in the fund can go up or down. When you sell your shares they may be worth less than you paid for them. The risk/reward rating above is based on medium-term volatility. In the future, the fund's actual volatility could be higher or lower and its rated risk/reward level could change.

The share classes appear at 4 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in share price in the past 5 years than those in lower categories. The lowest category does not mean risk free.

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events. Under normal market conditions the following risks may apply:

Active management risk Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.

Collective investment scheme risk The fund may invest in other types of collective investment schemes which can involve different risks to investing directly in the underlying assets. Such schemes may increase risk due to investment in risky assets such as property or commodities, restrictions on withdrawals, less strict regulation and use of derivatives. The value of your investment may fall as a result.

Counterparty risk The fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the fund.

Derivatives risk Derivatives use exposes the fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.

Exchange rate risk Changes in currency exchange rates may cause the value of your investment and any income from it to rise or fall.

Hedging risk Measures designed to reduce the impact of certain risks may not be available or may be ineffective.

Liquidity risk Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.

The full list of the fund's risks are contained in the "Risk Warnings" section of the fund's prospectus.

The risk rating changed from 5 to 4 in the period.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

This fund is a non-UCITS retail fund and we have adopted this disclosure to enable comparison across our fund range.

Investment review

Market review

The fund returned 4.8% over the period, underperforming the IA Mixed Investment 40-85% Shares sector average by 0.9%.

Strong performance from the fund's overall equity allocation helped to provide the fund with a strong absolute return. However, the fund's underperformance versus the sector average can be somewhat attributed to our relative underweight allocation, during the first half of the period, to European ex UK equities, which performed strongly over the six months. Nevertheless, the asset class provided the best contribution for the portfolio overall, with strong returns delivered by holdings in the BlackRock European Dynamic Fund and the Henderson European Growth Fund (up 15.8% and 13.9%, respectively), as both strongly outperformed the broader market. Elsewhere, solid performance contribution was received throughout the portfolio, through notable returns from positions in the CF Lindsell Train UK Equity Fund (up 13.1%), the Findlay Park American Fund (up 5.7%) and the Hermes Asia ex Japan Equity Fund (up 19.6%).

Meanwhile, the overall allocation to bonds delivered a negative contribution during the period. Notable holdings were the BlackRock Emerging Markets Flexible Dynamic Bond Fund, which fell by 6.2%, and the iShares \$ TIPS Exchange Traded Fund, which was down by 4.1%. Elsewhere, other detractors included the Fidelity American Special Situations Fund, down 1.5%, and ETFS Physical Gold, which lost 0.5%; both holdings lost some ground after gains at the start of the year.

Activity

The aggregate equity and bond allocations were both increased over the period, with reductions to property and cash; the remaining holding in the Henderson UK Property Fund was fully redeemed early in the period. The overall allocation to European ex UK equities was increased during the period, and in May the relative weighting versus the sector average was moved from an underweight to an overweight position. Within the underlying holdings, we fully redeemed the Artemis European Growth Fund, with proceeds funding a new holding in the Mandarin Unique Small & Mid-Caps Europe Fund. We also closed out the short position in Euro Stoxx 50 index futures.

Meanwhile, we redeemed the remaining holding in the Stewart Investors Emerging Market Leaders Fund, reallocating proceeds into the Henderson Gartmore Emerging Markets Fund. Elsewhere, we added a new holding in the BlackRock Emerging Markets Flexi Dynamic Bond Fund.

Within UK equities, we added a new small position (0.5%) in the Polar Capital UK Value Opportunities Fund. The new fund has a small/mid-cap bias with a value style, and is managed by a highly experienced team with a strong track record. The team is very well known to us from its previous tenure at Miton.

In fixed income, we reduced the weighting in government bonds, reallocating into high yield bonds, with a new investment into the AXA US Short Duration High Yield Fund. The holding in the Absolute Insight Emerging Market Debt Fund was completely sold.

Performance values are at close of business and may differ from the performance summary.

Operating charges

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures

There were no share classes launched or closed in the period.

Ongoing charge figure

The annualised ongoing charge figure (OCF) of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	31/07/17 %	31/01/17 %
Class A	2.34	2.36
Class B	2.34	2.36
Class I	1.52	1.54
Class Y	1.84	1.86

The OCF includes a synthetic element of 0.68% (31/01/17: 0.70%) to incorporate the OCF of underlying funds.

The OCF is calculated in accordance with guidelines issued by the European Securities and Markets Authority (ESMA).

The fund is a non-UCITS fund and we have used this disclosure to enable comparison across our fund range.

Risk and reward profile

The fund currently has 6 types of share class in issue: A income, A accumulation, B income, I accumulation, B accumulation and Y accumulation. The risk and reward profile of each type of share class is as follows:

The Synthetic Risk and Reward Indicator (SRRI) is calculated based on historical volatility over a rolling 5 year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions. The value of an investment in the fund can go up or down. When you sell your shares they may be worth less than you paid for them. The risk/reward rating above is based on medium-term volatility. In the future, the fund's actual volatility could be higher or lower and its rated risk/reward level could change.

The share classes appear at 4 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in share price in the past 5 years than those in lower categories. The lowest category does not mean risk free.

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events. Under normal market conditions the following risks may apply:

Active management risk Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.

Collective investment scheme risk The fund may invest in other types of collective investment schemes which can involve different risks to investing directly in the underlying assets. Such schemes may increase risk due to investment in risky assets such as property or commodities, restrictions on withdrawals, less strict regulation and use of derivatives. The value of your investment may fall as a result.

Counterparty risk The fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the fund.

Derivatives risk Derivatives use exposes the fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.

Exchange rate risk Changes in currency exchange rates may cause the value of your investment and any income from it to rise or fall.

Hedging risk Measures designed to reduce the impact of certain risks may not be available or may be ineffective.

Liquidity risk Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.

The full list of the fund's risks are contained in the "Risk Warnings" section of the fund's prospectus.

There have been no changes to the risk rating in the period.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

This fund is a non-UCITS retail fund and we have adopted this disclosure to enable comparison across our fund range.

Notes to the financial statements for the six months ended 31 July 2017

Accounting policies

The accounting policies, distribution policy and potential risks are consistent with those of the financial statements for the year ended 31 January 2017 and are described in those annual accounts.

Henderson Diversified Growth Fund

Authorised Corporate Director's report

Investment Fund Managers

Henderson Multi-Asset Team

Investment objective and policy

To achieve long term capital growth with some potential for income returns with lower than equity market volatility. The fund will invest predominantly in regulated collective investment schemes which may in turn invest in transferable securities, money market instruments and deposits. The fund may also invest in unregulated collective investment schemes which may include limited partnerships. Derivatives and forward transactions may be used by the fund for investment purposes to achieve asset allocation and for the purposes of efficient portfolio management. The fund may also invest directly in transferable securities, fixed income securities, money market instruments, deposits, cash and near cash.

Investment review

The Henderson Diversified Growth Fund returned 3.9% over the six months to 31 July 2017, in an improving macroeconomic environment. The fund outperformed both its benchmark and target of 3-month London Interbank Offered Rate (LIBOR) and 3-month LIBOR plus 4%, respectively, over the period. Longer term performance was also robust, as the fund outperformed its target over all periods in the last five years.

With the global economy gathering significant momentum over the period, it is unsurprising that the fund's growth assets contributed most plentifully to investment returns. The fund's equity portfolio was the key driver, with positive returns distributed across most of the major regions. In particular, European equities, buoyed by the strongest domestic macroeconomic momentum of any major economy and positive investor sentiment, were the largest single contributor. Europe was closely followed by emerging markets, which continued to outperform their developed counterparts. Credit was also a success story, with the fund's allocation to higher yielding securities providing the correct call as credit spreads (the extra yield over an equivalent government security) continued to narrow amid a mixed environment for safer bonds.

We made a number of key changes to the portfolio over the period. The majority of the changes were along the broad theme of reflation, moving away from some of the assets that have prospered in the 'lower for longer' environment towards a more balanced to cyclical view.

Within our equity allocations, this meant moving towards an overweight in more cyclical regions such as Europe (through Eurostoxx futures) and Japan (through Topix futures), while reducing our position regarding growth and low volatility factors (volatility means sharper fluctuations in prices) in favour of greater value sensitivity. Moreover, we meaningfully rebuilt our emerging markets allocation after a sustained period of underweight positions and added more active management in the UK and Japan through investments in the Polar Capital Value Opportunities Fund and the First State Japan Fund. The rationale for the decision was to greater insure the portfolio against what we believe will be a more difficult market environment over the coming years. The active managers that we have selected both have pronounced investing styles, which will help to diversify the fund's return drivers, as well as long track records of managing downside relative to the wider index.

In fixed income, we retained our underweight position but slowly began to reduce our credit holdings over the second half of the reporting period. This was implemented through a move away from high yield exchange traded funds towards actively managed and lower duration portfolios (duration is a measure of interest rate sensitivity), reducing our position in loans and making a number of shorter term tactical trades within the UK government bond market.

While the improving economic environment has proved conducive to generating investment returns across asset classes, it is not without risks. We are particularly cognisant of the suppression of volatility that currently characterises markets alongside the continued search for yield, which has pushed investors increasingly far up the risk spectrum. Further, from a strategic perspective, cross-asset valuations remain stretched and expected returns are low. We expect reversion in both metrics over the medium term, which we believe warrants a cautiously optimistic approach, with a greater focus on active management and dynamic asset allocation than was required in the 'easy money' decade to 2017.

Performance values are at close of business and may differ from the performance summary.

Operating charges

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures

There were no share classes launched or closed in the period.

Hedged share classes

Class K Euro hedged accumulation and Class K US Dollar hedged accumulation are hedged share classes. Hedged share classes allow the ACD to use currency hedging transactions to reduce the effect of fluctuations in the rate of exchange between the currency of share in those classes and Sterling which is the base currency of the fund.

Ongoing charge figure

The annualised ongoing charge figure (OCF) of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	31/07/17 %	31/07/17 %	31/01/17 %	31/01/17 %
Class A	1.90	n/a	1.88	n/a
Class K	1.70	1.96 *	1.68	2.18*
Class W	0.90	n/a	0.88	n/a
Class Y	0.85	n/a	0.83	n/a
Class Z	0.40	n/a	0.38	n/a
Class K Euro hedged	1.70	1.87*	1.68	1.97*
Class K US Dollar hedged	1.70	2.09*	1.68	2.21*

The OCF includes a synthetic element of 0.31% (31/01/17: 0.28%) to incorporate the OCF of underlying funds.

The OCF is calculated in accordance with guidelines issued by the European Securities and Markets Authority (ESMA).

The fund is a non-UCITS fund and we have used this disclosure to enable comparison across our fund range.

* Including performance fees

Risk and reward profile

The fund currently has 7 types of share class in issue: A accumulation, Y accumulation, Z accumulation, K accumulation, K Euro Hedged accumulation, K US Dollar Hedged accumulation and W accumulation. The risk and reward profile of each type of share class is as follows:

The Synthetic Risk and Reward Indicator (SRRI) is calculated based on historical volatility over a rolling 5 year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions. The value of an investment in the fund can go up or down. When you sell your shares they may be worth less than you paid for them. The risk/reward rating above is based on medium-term volatility. In the future, the fund's actual volatility could be higher or lower and its rated risk/reward level could change.

The share classes appear at 3 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in share price in the past 5 years than those in lower categories. The lowest category does not mean risk free.

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events. Under normal market conditions the following risks may apply:

Active management risk Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.

Collective investment scheme risk The fund may invest in other types of collective investment schemes which can involve different risks to investing directly in the underlying assets. Such schemes may increase risk due to investment in risky assets such as property or commodities, restrictions on withdrawals, less strict regulation and use of derivatives. The value of your investment may fall as a result.

Counterparty risk The fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the fund.

Derivatives risk Derivatives use exposes the fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.

Exchange rate risk Changes in currency exchange rates may cause the value of your investment and any income from it to rise or fall.

Hedging risk Measures designed to reduce the impact of certain risks may not be available or may be ineffective.

Leverage risk Leverage arises from entering into contracts or derivatives whose terms have the effect of magnifying an outcome, meaning profits and losses from investment can be greater.

Liquidity risk Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.

The full list of the fund's risks is contained in the "Risk Warnings" section of the fund's prospectus.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

This fund is a non-UCITS retail fund and we have adopted this disclosure to enable comparison across our fund range.

There has been no change to the risk rating in the period.

Authorised Corporate Director's report

Investment Fund Managers

Henderson Multi-Asset Team

Investment objective and policy

To achieve long term capital growth. The fund will seek to achieve its objective by investing globally in a diverse portfolio of investments which gain exposure indirectly to alternative asset classes such as property, commodities and hedge funds. The fund will invest primarily in investment trusts and investment companies. The fund may also invest in collective investment schemes (both regulated and unregulated), exchange traded funds (ETFs), transferable securities, fixed interest securities, money market instruments, deposits, cash and near cash. Derivatives and forward transactions may be used for the purposes of Efficient Portfolio Management (EPM).

Investment review

The fund generated a return of 4.5% during the six months ending 31 July 2017. This compared with a return of 2.8% generated by the CPI + 3% benchmark.

Private equity was the most profitable sector for the fund during the review period, contributing 1.5%. The positive performance of equity markets supported the performance of our private equity investments. Princess Private Equity Holding was the biggest contributor to performance, adding 0.3% to overall fund performance. Princess benefited from an allocation weighted towards Europe and the euro. Princess's underlying portfolio companies also performed strongly, as reflected in high earnings and revenue growth numbers.

Hedge funds also contributed significantly, adding 0.7% to performance. Boussard & Gavaudan Holdings was the largest contributor, adding 0.4%. The second highest contribution came from Helium Selection Fund, which added 0.3%. It was encouraging to see strong performance from these funds, which are both event-driven in nature; such funds have historically had limited correlation to traditional asset classes.

The fund's allocation to both infrastructure and renewable energy investments also contributed positively; both sectors added 0.6% to performance. In a low-yield world, both sectors are seen as solid income-producing asset classes able to provide an attractive yield spread to traditional income asset classes.

Credit markets also performed well. Our credit investments contributed 0.5% to fund performance. The fund continues to be weighted towards floating rate assets due to the low interest rate environment. The underlying holdings have continued to meet their objectives and pay attractive yields. The best performing fund was Toro, which contributed 0.2%.

The remaining sectors all contributed positively during the six months under review. The biggest detractor from performance was the Kames Equity Market Plus Fund. The fund does not take equity market exposure but instead tries to benefit from taking long positions in strongly performing stocks and shorting those stocks that the managers believe will perform less well. During the period, we trimmed the position due to poor performance and in consideration that one of the three managers left the company.

We also exited our position in Melchior European Select Fund, which has historically had a very low or negative beta to European equity markets. The fund has struggled given the strong performance of European markets over the past year, and we took the decision to sell the position in its entirety. An additional sale during the period was Fair Oaks Income. That fund did well over the past 18 months on the strong performance of US credit markets since February 2016. We now feel that it is time to reduce risk and take profits.

We opened a new position in PRS REIT during the period. PRS REIT invests in and develops private rental sector properties. There is a severe shortage of homes being built in the UK and home affordability is becoming more difficult, as house price inflation has outstripped wage inflation for a number of years. Furthermore, private landlords have been disadvantaged by government legislation in terms of stamp duty levies on second properties. This is part of a government plan to increase institutional participation in the rental sector.

Operating charges

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures

There were no share classes launched or closed in the period.

Ongoing charge figure

The annualised ongoing charge figure (OCF) of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	31/07/17	31/01/17
	%	%
Class Y	0.61	0.63
Class Z	0.18	0.20

The OCF includes a synthetic element of 0.12% (31/01/17: 0.13%) to incorporate the OCF of underlying funds.

The OCF is calculated in accordance with guidelines issued by the European Securities and Markets Authority (ESMA).

The fund is a non-UCITS fund and we have used this disclosure to enable comparison across our fund range.

Risk and reward profile

The fund currently has 3 types of share class in issue: Y accumulation, Z accumulation and Z income. The risk and reward profile of the share class is as follows:

The Synthetic Risk and Reward Indicator (SRRI) is calculated based on historical volatility over a rolling 5* year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions. The value of an investment in the fund can go up or down. When you sell your shares they may be worth less than you paid for them. The risk/reward rating above is based on medium-term volatility. In the future, the fund's actual volatility could be higher or lower and its rated risk/reward level could change.

The share classes appear at 3 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in share price in the past 5 years than those in lower categories. The lowest category does not mean risk free.

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events. Under normal market conditions the following risks may apply:

Active management risk Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.

Counterparty risk The fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the fund.

Derivatives risk Derivatives use exposes the fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.

Exchange rate risk Changes in currency exchange rates may cause the value of your investment and any income from it to rise or fall.

Hedging risk Measures designed to reduce the impact of certain risks may not be available or may be ineffective.

Liquidity risk Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.

The full list of the fund's risks are contained in the "Risk Warnings" section of the fund's prospectus.

There have been no changes to the risk rating in the period.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

This fund is a non-UCITS retail fund and we have adopted this disclosure to enable comparison across our fund range.

*The fund was launched on 22 February 2013, therefore, the SRRI is calculated based on historical volatility over a rolling period since inception.

Henderson Core 3 Income Fund

Authorised Corporate Director's report

Investment Fund Managers

Henderson Multi-Asset Team

Investment objective and policy

The fund aims to provide a sustainably high income return whilst maintaining a moderately low level of volatility (variation of returns) over the medium to long term. The fund is managed so that it aims not to deviate from predetermined parameters of forecast volatility, as measured by an independent risk rating body, over a medium to long term rolling period of at least 5 years. However, during this period the fund's forecast volatility may be outside of such parameters if the portfolio manager believes it is expedient to be so in order to maintain investment performance. Observing the forecast volatility parameters will be prioritised over the generation of income. The fund will invest in a combination of transferable securities, fixed income securities, investment companies, collective investment schemes, exchange traded funds (ETFs) money market instruments, deposits, cash and near cash. Derivatives and forward transactions may be used by the fund for investment purposes to achieve asset allocation and for the purposes of efficient portfolio management.

Investment review

Market review

The fund returned 3.1% over the period.

Strong positive performance contribution was delivered throughout the underlying portfolio across the multi-asset and multi-instrument holdings. The one exception to this dynamic of positive performance was the commodities universe, but this diversification did not detract from the strong returns delivered by other assets.

International equity holdings benefited from region-specific dynamics and sterling weakness towards the end of the period. The Henderson Asian Dividend Income Fund performed well, as previously unloved cyclical emerging market stocks saw a reversal in investor sentiment. US equities continued to reach record highs as markets rewarded positive earnings growth, which was captured by the S&P 500 CFD (Contract for Difference) and the direct holding in Microsoft. UK equity holdings saw international revenue streams perform strongly following the European Union referendum, which supported large cap holdings, including the City of London Investment Trust and direct holdings in Vodafone and Rio Tinto.

Elsewhere, market volatility (sharper fluctuations in prices) led to high duration assets (duration is a measure of interest rate sensitivity) faring particularly well over the period, as political uncertainty and softer inflation prints allowed yields to fall (prices move inversely to yields) and spreads to tighten. The iShares Core UK Gilt Exchange Traded Fund (ETF) and the SPDR Barclays Sterling Corporate Bond ETF both benefited from the dual elements of this dynamic, while higher risk fixed instruments such as the iShares USD High Yield Corporate Bond also delivered substantial returns. Emerging market bonds saw a rotation in investor sentiment and experienced strong performance. This environment presented a good opportunity for positive returns from strategic bond funds, with the Henderson Fixed Interest Monthly Income Fund participating in the general fixed income rally.

Alternative asset classes were mixed over the period. Overall, investors saw strong performance in terms of net asset value and the tightening of discounts, with the Princess Private Equity Trust and the Picton Property Income Trust both delivering positive returns. Commodities and commodity producers had a tougher time, but continue to offer protection against a potential inflationary surprise.

The headline asset allocation of the fund was broadly unchanged over the course of the period. However, political and market volatility delivered opportunities to adjust the underlying shape of the equity allocation. No new positions were added, but there was activity to adjust position sizes and regional allocation. European equities were increased through the iShares Euro Stoxx Select Dividend 30 ETF, which was partly funded by our UK equity holdings.

In alternatives, a new holding was added in the Private Rental Sector Real Estate Investment Trust, an investment trust that offers a competitive initial yield and opportunities for the development of affordable rental properties with government support. Elsewhere, positions were increased in structured fixed income strategies, such as Carador Income Trust.

As with the equity allocation, the position in fixed income was unchanged at the aggregate level but saw significant rotation of underlying holdings. The performance of credit and high yield continued to be relatively resilient despite volatility in spreads, which presented opportunities to take profits and add a position in the iShares EM Local Government Bond ETF.

Our view remains constructive. We retain a strong preference for equities over bonds and continue to hold a more cyclical tilt to many of our regional equity allocations. However, we are cognisant that markets have priced in plenty of good news already. In our view, continued economic and earnings data will naturally slow as time progresses. One of the key questions for the rest of the year will be the extent to which bond and equity markets can withstand a gradual reduction in monetary stimulus, which has helped to support markets in recent years.

Operating charges

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures

There were no share classes launched or closed in the period.

Ongoing charge figure

The annualised ongoing charge figure (OCF) of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	31/07/17	31/01/17
	%	%
Class A	1.35	1.31
Class I	0.75	0.71

The OCF includes a synthetic element of 0.18% (31/01/17: 0.18%) to incorporate the OCF of underlying funds.

The ACD made a contribution to limit the fund's OCF ratio.

The OCF is calculated in accordance with guidelines issued by the European Securities and Markets Authority (ESMA).

The fund is a non-UCITS fund and we have used this disclosure to enable comparison across our fund range.

Risk and reward profile

The fund currently has 4 types of share class in issue: A income, A accumulation, I income and I accumulation. The risk and reward profile of each type of share class is as follows:

The Synthetic Risk and Reward Indicator (SRRRI) is calculated based on historical volatility over a rolling 5* year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRRI level. The SRRRI is an indicator and may not accurately reflect future volatility and market conditions. The value of an investment in the fund can go up or down. When you sell your shares they may be worth less than you paid for them. The risk/reward rating above is based on medium-term volatility. In the future, the fund's actual volatility could be higher or lower and its rated risk/reward level could change.

The share classes appear at 4 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in share price in the past 5 years than those in lower categories. The lowest category does not mean risk free.

The Fund targets a risk profile of 3 as calculated by Distribution Technology who is engaged by Janus Henderson Investors as an independent provider of risk profiling tools to funds and investment advisers. Distribution Technology profiles funds using a rating scale of 1-10 and takes into consideration risk targets and other factors as well as past data. Investors should note that the Distribution Technology risk profile is different to the "Risk and Reward Profile" scale above, which is an industry standard required by the FCA using a scale of 1-7 and which only takes into account past data.

For further information on the Distribution Technology risk profile please contact us or refer to the Fund's prospectus.

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events. Under normal market conditions the following risks may apply:

Active management risk Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.

Collective investment scheme risk The fund may invest in other types of collective investment schemes which can involve different risks to investing directly in the underlying assets. Such schemes may increase risk due to investment in risky assets such as property or commodities, restrictions on withdrawals, less strict regulation and use of derivatives. The value of your investment may fall as a result.

Counterparty risk The fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the fund.

Derivatives risk Derivatives use exposes the fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.

Exchange rate risk Changes in currency exchange rates may cause the value of your investment and any income from it to rise or fall.

Hedging risk Measures designed to reduce the impact of certain risks may not be available or may be ineffective.

Leverage risk Leverage arises from entering into contracts or derivatives whose terms have the effect of magnifying an outcome, meaning profits and losses from investment can be greater.

Liquidity risk Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.

The full list of the fund's risks are contained in the "Risk Warnings" section of the fund's prospectus.

There have been no changes to the risk rating in the period.

The SRRRI conforms to the ESMA guidelines for the calculation of the SRRRI.

This fund is a non-UCITS retail fund and we have adopted this disclosure to enable comparison across our fund range.

*The fund was launched on 24 September 2012, therefore, the SRRRI is calculated based on historical volatility over a rolling period since inception.

Henderson Core 4 Income Fund

Authorised Corporate Director's report

Investment Fund Managers

Henderson Multi-Asset Team

Investment objective and policy

To provide a sustainably high income return with the prospect for some capital growth whilst maintaining a moderate to moderately low level of volatility (variation of returns) over the medium to long term. The fund is managed so that it aims not to deviate from predetermined parameters of forecast volatility, as measured by an independent risk rating body, over a medium to long term rolling period of at least 5 years. However, during this period the fund's forecast volatility may be outside of such parameters if the portfolio manager believes it is expedient to do so in order to improve investment performance. Observing the forecast volatility parameters will be prioritised over the generation of income. The fund will invest in a combination of transferable securities, fixed income securities, investment companies, collective investment schemes, exchange traded funds (ETFs), money market instruments, deposits, cash and near cash. Derivatives and forward transactions may be used by the fund for investment purposes to achieve asset allocation and for the purposes of efficient portfolio management.

Performance summary

Cumulative performance

	Six months 31 Jan 17- 31 Jul 17 %	One year 31 Jul 16- 31 Jul 17 %	Since launch 10 May 13- 31 Jul 17 %
Henderson Core 4 Income Fund	3.9	8.3	19.5

Discrete performance

	31 Jul 16- 31 Jul 17 %	31 Jul 15- 31 Jul 16 %	31 Jul 14- 31 Jul 15 %	31 Jul 13- 31 Jul 14 %
Henderson Core 4 Income Fund	8.3	5.9	2.7	2.9

Source: Morningstar - Bid to bid and net of fees as a 12 noon valuation point, GBP, based on performance of Class I income.

Please remember that past performance is not a guide to future performance. The value of an investment and the revenue from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested.

Investment review

Market review

The fund returned 3.9% over the period.

Strong positive performance contribution was delivered throughout the underlying portfolio across the multi-asset and multi-instrument holdings. The one exception to this dynamic of positive performance was the commodities universe, but this diversification did not detract from the strong returns delivered by other assets.

International equity holdings benefited from region-specific dynamics and sterling weakness towards the end of the period. The Invesco Perpetual European Income Fund performed well, as previously unloved financials saw a reversal in investor sentiment. US equities continued to reach record highs as markets rewarded positive earnings growth, which was captured by the S&P 500 CFD (Contracts for Difference) and the direct holding in Microsoft. UK equity holdings saw international revenue streams perform strongly following the European Union referendum, which supported large cap holdings, including the City of London Investment Trust and direct holdings in Vodafone and Rio Tinto.

Elsewhere, market volatility (sharper fluctuations in prices) led to high duration assets (duration is a measure of interest rate sensitivity) faring particularly well over the period as political uncertainty and softer inflation prints allowed yields to fall (prices move inversely to yields) and spreads to tighten. The iShares Core UK Gilt Exchange Traded Fund (ETF) and the SPDR Barclays Sterling Corporate Bond ETF both benefited from the dual elements of this dynamic, while higher-risk fixed instruments such as the iShares Euro High Yield Corporate Bond ETF also delivered substantial returns. Emerging market bonds saw a rotation in investor sentiment and experienced strong performance. This environment presented a good opportunity for positive returns from strategic bond funds, with the Henderson Fixed Interest Monthly Income Fund participating in the general fixed income rally.

Alternative asset classes were mixed over the period. Overall, investors saw strong performance in terms of net asset value and the tightening of discounts, with both the Princess Private Equity Trust and the Picton Property Income Trust delivering positive returns. Commodities and commodity producers had a tougher time but continue to offer protection against a potential inflationary surprise.

Activity

The headline asset allocation of the fund was broadly unchanged over the course of the quarter. However, political and market volatility delivered opportunities to adjust the underlying shape of the equity allocation. No new positions were added, but there was activity to adjust position sizes and regional allocation. European equities were increased through the iShares Euro Stoxx Select Dividend 30 ETF, which was partly funded by trimming UK equity holdings.

In alternatives, a new holding was added in the Private Rental Sector Real Estate Investment Trust, an investment trust that offers a competitive initial yield and opportunities for the development of affordable rental properties with government support. Elsewhere, a holding in HICL Infrastructure was opened and positions were increased in structured fixed income strategies such as Blackstone GSO Loan Financing Trust.

As with the equity allocation, the position in fixed income was unchanged at the aggregate level but saw significant rotation of underlying holdings. The performance of credit and high yield continued to be relatively resilient despite volatility in spreads, which presented opportunities to take profits and add a position in the iShares EM Local Government Bond ETF.

Outlook

Our view remains constructive. We retain a strong preference for equities over bonds and continue to hold a more cyclical tilt to many of our regional equity allocations. However, we are cognisant that markets have priced in plenty of good news already. We believe that continued economic and earnings data will naturally slow as time progresses. One of the key questions for the rest of the year will be the extent to which bond and equity markets can withstand a gradual reduction in monetary stimulus, which has helped to support markets in recent years.

Performance values are at close of business and may differ from the performance summary.

Operating charges

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures

There were no share classes launched or closed in the period.

Ongoing charge figure

The annualised ongoing charge figure (OCF) of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	31/07/17	31/01/17
	%	%
Class I	0.75	0.72

The OCF includes a synthetic element of 0.19% (31/01/17: 0.18%) to incorporate the OCF of underlying funds.

The ACD made a contribution to limit the fund's OCF ratio.

The OCF is calculated in accordance with guidelines issued by the European Securities and Markets Authority (ESMA).

The fund is a non-UCITS fund and we have used this disclosure to enable comparison across our fund range.

Risk and reward profile

The fund currently has 2 types of share class in issue: I income and I accumulation. The risk and reward profile of each type of share class is as follows:

The Synthetic Risk and Reward Indicator (SRRI) is calculated based on historical volatility over a rolling 5* year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions. The value of an investment in the Fund can go up or down. When you sell your shares they may be worth less than you paid for them. The risk/reward rating above is based on medium-term volatility. In the future, the fund's actual volatility could be higher or lower and its rated risk/reward level could change.

The share classes appear at 5 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in share price in the past 5 years than those in lower categories. The lowest category does not mean risk free.

The Fund targets a risk profile of 5 as calculated by Distribution Technology who is engaged by Janus Henderson Investors as an independent provider of risk profiling tools to funds and investment advisers. Distribution Technology profiles funds using a rating scale of 1-10 and takes into consideration risk targets and other factors as well as past data. Investors should note that the Distribution Technology risk profile is different to the "Risk and Reward Profile" scale above, which is an industry standard required by the FCA using a scale of 1-7 and which only takes into account past data.

For further information on the Distribution Technology risk profile please contact us or refer to the Fund's prospectus.

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events. Under normal market conditions the following risks may apply:

Active management risk Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.

Collective investment scheme risk The fund may invest in other types of collective investment schemes which can involve different risks to investing directly in the underlying assets. Such schemes may increase risk due to investment in risky assets such as property or commodities, restrictions on withdrawals, less strict regulation and use of derivatives. The value of your investment may fall as a result.

Counterparty risk The fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the fund.

Derivatives risk Derivatives use exposes the fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.

Exchange rate risk Changes in currency exchange rates may cause the value of your investment and any income from it to rise or fall.

Hedging risk Measures designed to reduce the impact of certain risks may not be available or may be ineffective.

Leverage risk Leverage arises from entering into contracts or derivatives whose terms have the effect of magnifying an outcome, meaning profits and losses from investment can be greater.

Liquidity risk Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.

The full list of the fund's risks are contained in the "Risk Warnings" section of the fund's prospectus.

There have been no changes to the risk rating in the period.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

This fund is a non-UCITS retail fund and we have adopted this disclosure to enable comparison across our fund range.

*The fund was launched on 10 May 2013, therefore, the SRRI is calculated based on historical volatility over a rolling period since inception.

Henderson Core 5 Income Fund

Authorised Corporate Director's report

Investment Fund Managers

Henderson Multi-Asset Team

Investment objective and policy

The fund aims to provide a sustainably high income return with the prospect for some capital growth whilst maintaining a moderate level of volatility (variation of returns) over the medium to long term. The fund is managed so that it aims not to deviate from predetermined parameters of forecast volatility, as measured by an independent risk rating body, over a medium to long term rolling period of at least 5 years. However, during this period the FUND's forecast volatility may be outside of such parameters if the portfolio manager believes it is expedient to do so in order to improve investment performance. Observing the forecast volatility parameters will be prioritised over the generation of income. The fund will invest in a combination of transferable securities, fixed income securities, investment companies, collective investment schemes, exchange traded funds (ETFs), money market instruments, deposits, cash and near cash. Derivatives and forward transactions may be used by the fund for investment purposes to achieve asset allocation and for the purposes of efficient portfolio management.

Performance summary

Cumulative performance

	Six months 31 Jan 17 - 31 Jul 17 %	One year 31 Jul 16 - 31 Jul 17 %	Since launch 24 Sep 12 - 31 Jul 17 %

Investment review

The fund returned 4.6% over the period.

Strong positive performance contribution was delivered throughout the underlying portfolio across the multi-asset and multi-instrument holdings. The one exception to this dynamic of positive performance was the commodities universe, but this diversification did not detract from the strong returns delivered by other assets.

International equity holdings benefited from region-specific dynamics and sterling weakness towards the end of the period. The Henderson Asian Dividend Income Fund performed well, as previously unloved cyclical emerging market stocks saw a reversal in investor sentiment. US equities continued to reach record highs as markets rewarded positive earnings growth, which was captured by the S&P 500 CFD (Contracts for Difference) and the direct holding in Microsoft. UK equity holdings saw international revenue streams perform strongly following the European Union referendum, which supported large cap holdings, including the City of London Investment Trust and direct holdings in Vodafone and Rio Tinto.

Elsewhere, market volatility (sharper fluctuations in prices) led to high duration assets (duration is a measure of interest rate sensitivity) faring particularly well over the period as political uncertainty and softer inflation prints allowed yields to fall (prices move inversely to yields) and spreads to tighten. The iShares Core UK Gilt Exchange Traded Fund (ETF) and the SPDR Barclays Sterling Corporate Bond ETF both benefited from the dual elements of this dynamic, while higher-risk fixed instruments such as the iShares USD High Yield Corporate Bond also delivered substantial returns. Emerging market bonds saw a rotation in investor sentiment and experienced strong performance. This environment presented a good opportunity for positive returns from strategic bond funds, with the Henderson Fixed Interest Monthly Income Fund participating in the general fixed income rally.

Alternative asset classes were mixed over the period. Overall, investors saw strong performance in terms of net asset value and the tightening of discounts, with both the Princess Private Equity Trust and the Picton Property Income Trust delivering positive returns. Commodities and commodity producers had a tougher time but continue to offer protection against a potential inflationary surprise.

The headline asset allocation of the fund was broadly unchanged over the course of the period, but political and market volatility delivered opportunities to adjust the underlying shape of the equity allocation. New positions were added in the SPDR UK Dividend Aristocrats ETF and the Invesco Income Growth Trust. European equities were increased through the iShares Euro Stoxx Select Dividend 30 ETF, which was partly funded by selling the FTSE 100 and S&P 500 futures.

In alternatives, a new holding was added in the Private Rental Sector Real Estate Investment Trust, an investment trust that offers a competitive initial yield and opportunities for the development of affordable rental properties with government support. Elsewhere, a holding in HICL Infrastructure was opened and positions were increased in structured fixed income strategies such as Blackstone GSO Loan Financing Trust.

As with the equity allocation, the position in fixed income was unchanged at the aggregate level but saw a significant rotation in underlying holdings. The performance of credit and high yield continued to be relatively resilient despite volatility in spreads, which presented opportunities to take profits and add a position in the iShares EM Local Government Bond ETF.

Our view remains constructive. We retain a strong preference for equities over bonds and continue to hold a more cyclical tilt to many of our regional equity allocations. However, we are cognisant that markets have priced in plenty of good news already. We believe that continued economic and earnings data will naturally slow as time progresses. One of the key questions for the rest of the year will be the extent to which bond and equity markets can withstand a gradual reduction in monetary stimulus, which has helped to support markets in recent years.

Performance values are at close of business and may differ from the performance summary.

Operating charges

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures

There were no share classes launched or closed in the period.

Ongoing charge figure

The annualised ongoing charge figure (OCF) of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	31/07/17	31/01/17
	%	%
Class A	1.35	1.31
Class I	0.75	0.72

The OCF includes a synthetic element of 0.19% (31/01/17: 0.18%) to incorporate the OCF of underlying funds.

The ACD made a contribution to limit the fund's OCF ratio.

The OCF is calculated in accordance with guidelines issued by the European Securities and Markets Authority (ESMA).

The fund is a non-UCITS fund and we have used this disclosure to enable comparison across our fund range.

Henderson Core 6 Income & Growth Fund

Authorised Corporate Director's report

Investment Fund Managers

Henderson Multi-Asset Team

Investment objective and policy

To provide a sustainable income return with the prospect for capital growth whilst maintaining a moderately high level of volatility (variation of returns) over the medium to long term. The fund is managed so that it aims not to deviate from predetermined parameters of forecast volatility, as measured by an independent risk rating body, over a medium to long term rolling period of at least 5 years. However, during this period the fund's forecast volatility may be outside of such parameters if the portfolio manager believes it is expedient to do so in order to improve investment performance. Observing the forecast volatility parameters will be prioritised over the generation of income and capital growth. The fund will invest in a combination of transferable securities, fixed income securities, investment companies, collective investment schemes, exchange traded funds (ETFs), money market instruments, deposits, cash and near cash. Derivatives and forward transactions may be used by the fund for investment purposes to achieve asset allocation and for the purposes of efficient portfolio management.

Performance summary

Cumulative performance

	Six months 31 Jan 17 - 31 July 17 %	One year 31 July 16 - 31 July 17 %	Since launch 10 May 13 - 31 July 17 %

Investment review

The fund returned 5.6% over the period.

Strong positive performance contribution was delivered throughout the underlying portfolio across the multi-asset and multi-instrument holdings. The one exception to this dynamic of positive performance was the commodities universe, but this diversification did not detract from the strong returns delivered by other assets.

International equity holdings benefited from region-specific dynamics and sterling weakness towards the end of the period. The Invesco Perpetual European Income Fund performed well as previously unloved financials saw a reversal in investor sentiment. US equities continued to reach record highs as markets rewarded positive earnings growth, which was captured by the S&P 500 CFD (Contracts for Difference) and the direct holding in Microsoft. UK equity holdings saw international revenue streams perform strongly following the European Union referendum, which supported large cap holdings including the City of London Investment Trust and direct holdings in Vodafone and Rio Tinto.

Elsewhere, market volatility (sharper fluctuations in prices) led to high duration assets (duration is a measure of interest rate sensitivity) faring particularly well over the period, as political uncertainty and softer inflation prints allowed yields to fall (prices move inversely to yields) and spreads to tighten. The iShares Core UK Gilt Exchange Traded Fund (ETF) and the SPDR Barclays Sterling Corporate Bond ETF both benefitted from the dual elements of this dynamic, while higher-risk fixed instruments such as the iShares Euro High Yield Corporate Bond ETF also delivered substantial returns. Emerging market bonds saw a rotation in investor sentiment and experienced strong performance. This environment presented a good opportunity for positive returns from strategic bond funds, with the Henderson Fixed Interest Monthly Income Fund participating in the general fixed income rally.

Alternative asset classes were mixed over the period. Overall, investors saw strong performance in terms of net asset value and the tightening of discounts, with both the Princess Private Equity Trust and the Picton Property Income Trust delivering positive returns. Commodities and commodity producers had a tougher time but continue to offer protection against a potential inflationary surprise.

The headline asset allocation of the fund was broadly unchanged over the course of the period, but political and market volatility delivered opportunities to adjust the underlying shape of the equity allocation. New positions were added in the SPDR UK Dividend Aristocrats ETF and the Invesco Income Growth Trust. European equities were increased through the iShares Euro Stoxx Select Dividend 30 ETF, which was partly funded by selling the FTSE 100 and S&P 500 futures.

In alternatives, a new holding was added in the Private Rental Sector Real Estate Investment Trust, an investment trust that offers a competitive initial yield and opportunities for the development of affordable rental properties with government support. Elsewhere, a holding in HICL Infrastructure was opened and positions were topped up in structured fixed income strategies, such as Carador Income Trust.

As with the equity allocation, the position in fixed income was unchanged at the aggregate level but saw a significant rotation in underlying holdings. The performance of credit and high yield continued to be relatively resilient despite volatility in spreads, which presented opportunities to take profits and add a position in the iShares EM Local Government Bond ETF.

Our view remains constructive. We retain a strong preference for equities over bonds and continue to hold a more cyclical tilt to many of our regional equity allocations. However, we are cognisant that markets have priced in plenty of good news already. We believe that continued economic and earnings data will naturally slow as time progresses. One of the key questions for the rest of the year will be the extent to which bond and equity markets can withstand a gradual reduction in monetary stimulus, which has helped to support markets in recent years.

Performance values are at close of business and may differ from the performance summary.

Operating charges

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures

There were no share classes launched or closed in the period.

Ongoing charge figure

The annualised ongoing charge figure (OCF) of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	31/07/17	31/01/17
	%	%
Class I	0.75	0.72

The OCF includes a synthetic element of 0.20% (31/01/17: 0.18%) to incorporate the OCF of underlying funds.

The ACD made a contribution to limit the OCF ratio.

The OCF is calculated in accordance with guidelines issued by the European Securities and Markets Authority (ESMA).

The fund is a non-UCITS fund and we have used this disclosure to enable comparison across our fund range.

Risk and reward profile

The fund currently has 2 types of share class in issue: I income and I accumulation. The risk and reward profile of each type of share class is as follows:

The Synthetic Risk and Reward Indicator (SRRI) is calculated based on historical volatility over a rolling 5* year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions. The value of an investment in the fund can go up or down. When you sell your shares they may be worth less than you paid for them. The risk/reward rating above is based on medium-term volatility. In the future, the fund's actual volatility could be higher or lower and its rated risk/reward level could change.

The share classes appear at 6 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in share price in the past 5 years than those in lower categories. The lowest category does not mean risk free.

The Fund targets a risk profile of 6 as calculated by Distribution Technology who is engaged by Janus Henderson Investors as an independent provider of risk profiling tools to funds and investment advisers. Distribution Technology profiles funds using a rating scale of 1-10 and takes into consideration risk targets and other factors as well as past data. Investors should note that the Distribution Technology risk profile is different to the "Risk and Reward Profile" scale above, which is an industry standard required by the FCA using a scale of 1-7 and which only takes into account past data.

For further information on the Distribution Technology risk profile please contact us or refer to the Fund's prospectus.

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events. Under normal market conditions the following risks may apply:

Active management risk Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.

Collective investment scheme risk The fund may invest in other types of collective investment schemes which can involve different risks to investing directly in the underlying assets. Such schemes may increase risk due to investment in risky assets such as property or commodities, restrictions on withdrawals, less strict regulation and use of derivatives. The value of your investment may fall as a result.

Counterparty risk The fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the fund.

Derivatives risk Derivatives use exposes the fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.

Exchange rate risk Changes in currency exchange rates may cause the value of your investment and any income from it to rise or fall.

Hedging risk Measures designed to reduce the impact of certain risks may not be available or may be ineffective.

Leverage risk Leverage arises from entering into contracts or derivatives whose terms have the effect of magnifying an outcome, meaning profits and losses from investment can be greater.

Liquidity risk Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.

The full list of the fund's risks are contained in the "Risk Warnings" section of the fund's prospectus.

There have been no changes to the risk rating in the period.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

This fund is a non-UCITS retail fund and we have adopted this disclosure to enable comparison across our fund range.

*The fund was launched on 10 May 2013, therefore, the SRRI is calculated based on historical volatility over a rolling period since inception.
