

UNDERSTANDING INVESTMENT TRUSTS

Janus Henderson
—KNOWLEDGE. SHARED—

WHAT IS AN INVESTMENT TRUST?

An investment trust is an investment company, a type of collective investment, listed on the London Stock Exchange. Most investment trusts aim to make money by investing in other companies or other assets.

Like M&S or Rolls-Royce, investment trusts are similar to other listed companies, with a board and professionals who carry out the business activities. Instead of selling food or jet engines, a trust's business is investing in other companies.

For example, Henderson Global Investors manage a number of trusts.

Like any other company listed on a stock exchange, an investment trust has shareholders. These are the trust's investors. The end investor will invest via an intermediary, such as a wealth manager or stock broker, or directly, using a share dealing service.

RESEARCH

Before investing in an investment trust, it is a good idea to do some research. Information about investment trusts can be found in lots of places, from a national newspaper supplement through to specialist or fund manager websites.

HOW DO THEY MAKE MONEY?

Investment trusts will have a clear objective – growth or income, or both – and all trusts are likely to be positioned to aim for medium – long-term growth.

With around 400 trusts to choose from, you can go global, target a specific region or stay closer to home.

Investment trusts can offer access to a wide range of markets and asset classes. The portfolio may contain a wide range of investments, or may take a more focused approach.

DIVERSIFIED

There are trusts that invest in companies across a number of industries and countries.

SPECIFIC

There are also trusts which focus specifically on a particular sector or asset class.

WHAT ELSE DO YOU NEED TO KNOW?

As with any investment there are different risks to consider and costs involved. Investment trusts can be low cost and shares in a trust can be bought in a tax-efficient ISA, while the risks will vary depending on the type of trust.

COSTS

0.42%

Each trust will pay a management charge to the professional fund manager. This can be as low as 0.42% for some large actively-managed trusts. For some trusts, a performance fee may be paid.

£

There are likely to be share dealing charges when shares in a trust are bought and sold. This charge will vary depending on the service you choose to trade shares, but may be as little as £10. Investors also pay stamp duty tax when buying shares.

ISA

When dividends are received from an investment, 10% tax is deducted at source, with the difference up to an investor's marginal tax rate paid through a tax return. Investing in an ISA wrapper exempts investors from additional income tax and any capital gains tax.

RISKS

1

Across all trusts, the share price can rise and fall. This is also the case for any income paid out by an investment trust.

2

The risk of individual trusts will vary and will often change in relation to the potential reward available.

3

The amount of risk you take will often depend on the type of asset invested in or the number of underlying assets.

4

How easily and quickly fund managers can buy or sell the underlying asset (known as liquidity) also affects risk.

The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested.
