General risks

- The value of the funds and the income from them is not guaranteed and may fall as well as rise. You may get back less than you originally invested.
- Past performance is not a guide to future performance.
- You should note that your tax treatment in relation to any investments held outside an ISA will depend on your individual circumstances and may be subject to change in the future. Governments may change the tax rules which affect you or the funds in which you have invested.

What are the risks specific to this fund?

- Where the funds invest in assets (including cash) which are denominated in currencies other than the base currency (pounds sterling) then currency exchange rate movements may cause the value of investments to fall as well as rise.
- With funds investing in bonds there is a risk that interest rate fluctuations could affect the capital value of investments. Where long term interest rates rise, the capital value of shares/units is likely to fall, and vice versa. In addition to the interest rate risk, bond investments are also exposed to credit risk reflecting the ability of the borrower (i.e. bond issuer) to meet its obligations (i.e. pay the interest on a bond and return the capital on the redemption date). The risk of this happening is usually higher with bonds classified as 'sub-investment grade'. These may produce a higher level of income but at a higher risk than investments in 'investment grade' bonds. In turn, this may have an adverse impact on funds that invest in such bonds.
- Funds may be unable to invest in certain sectors and companies due to the ethical screening that they undertake. This may mean that they are more sensitive to price swings than other funds.
- This fund is designed to be used only as one component in several in a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested into this fund.
